

**DELIVERING COST REDUCTIONS AND LOWERING HSE EXPOSURE  
THROUGH AUTOMATED GAMMA AND REMOTE OPERATIONS.**

**Automated Gamma services** allows you to access data on virtually any device or platform. The real-time data constantly updates to Cathedral's server and a secure link is provided to geology for on demand access either on-site or remotely.

**Remote Operations support** involves connecting to multiple rig sites to provide continuous monitoring of drilling and directional parameters from our remote facility, the client's office, or any other remote location requested.

The key benefits are:

## **SAVINGS**

**By augmenting drilling programs with Automated Gamma services and Remote Drilling, clients can realize program savings in several areas:**

- Infield personnel charges
- Mobilization/demobilization
- Subsistence and infield
- Mileage and standby charges

## **REDUCED RISK**

**Supporting drilling programs and real-time data with remote operations significantly reduces risk:**

- Reduced HSE exposure
- Fewer personnel on roadways and onsite
- Reduced environmental impact/footprint
- Redundancy/remote validation on directional sets
